

Appendix 2 figure: Stereonets shown above represent an interpretation of the folds based on fold interlimb angle. A) Gentle interlimb angle of 180-120 degrees. B) Open interlimb angle of 120-70 degrees. C) Tight interlimb angle of 70-30 degrees. D) Isoclinal interlimb angle of 30-0 degrees. The stereonet shows great circles representing axial planes while the black dots represent fold axis for each individual fold.
