

Contents of Attachments folder

This file describes the contents of the attachments folder.

The folder contains:

- **A folder (Developed systems) containing the code for all systems that have been developed in this project.**
 - The “CBR system” folder contains the Javadoc and the project folder with the source code for the complete CBR system.
 - The “Intention module” folder contains two folders, C++ code and Java code. The C++ code is mainly developed by an earlier MSc, John Sverre Solem. The files Client.cpp and Client.h have been added, and the file UserHandler.cpp has been modified by us. The Java code folder contains the whole Java project.
 - The “CrossValidationAndEA” folder contains the project folder with the source code for the cross-validation system and the evolutionary algorithm.
 - The “SendPedestrians” folder contains the project folder with the source code for the module for sending pedestrians into the CBR system.
- **A folder (Other attachments) containing all other attachments than the system’s code.**
 - A guide on how to install the developed system.
 - Two excel files with the results from counting vehicles and pedestrians at Brattøra.
 - A folder (Evaluation) containing the raw results from the test scenarios.
