

DC MOTOR CONTROLLER MODULE

DCM

X10335

INTRODUCTION

This general purpose, modulated, pulse width, low voltage DC controller, can be operated in any of the following modes:

Motor Control: High Frequency (RT/RT1 no link) speed control set by a 5K Ω potentiometer.

Lighting/Heating Control: Low frequency (RT/RT1 linked) output level set by a 5K Ω potentiometer as above.

Temperature Control: Thermistor connected across RT/RT1, with a temperature range of 5-130°C. Temperature set by a 5K Ω potentiometer.

APPLICATIONS

Include speed control of low voltage, high frequency, DC motors, low voltage lighting and medium frequency heaters.

FUSING

It is recommended that semiconductor, fast acting type fuses or circuit breakers (Semiconductor-MCB) be used for unit/device protection. On initial operation some loads may need an increased Factor of Safety (F of S) for unit and/or device protection. See SRA Data sheet for further information.

CE MARKING

This product family carries a "CE" marking. For information see recommendation section and contact our sales desk. See Declaration of Conformity.
