Abstract

A widely accessible list of known plant species is a fundamental requirement for global biodiversity conservation targets. An index of published names of liverworts and hornworts between 2017 and 2018 is provided as part of a community effort in working toward maintaining an updated world checklist of these groups. The list herein includes 23 higher taxon names, 143 specific names, 21 infraspecific names, one infrageneric autonym and 13 infraspecific autonyms for 2017 and 2018, including also names of fossils and invalid and illegitimate names. Sixteen older names omitted in the earlier indices are included.

Keywords: Liverworts, hornworts, index, nomenclature, fossils, new names

Introduction

Liverworts (Marchantiophyta) and hornworts (Anthocerotophyta) are of critical biological, ecological, and phylogenetic significance (e.g., Asakawa 1999, Gradstein *et al.* 2001, Wellman *et al.* 2003, Qiu *et al.* 2007, Huttunen *et al.* 2017, Morris *et al.* 2013). The publication of new liverwort and hornwort names remains vastly scattered across dozens of journals, a common problem that extends to accessibility of biodiversity data generally (Collin *et al.* 2016). Centralization and standardization of biodiversity data can lead to increased accessibility and lead to the development of checklists and other resources as powerful and important tools for taxonomy and conservation (Söderström *et al.* 2008).

This index follows on from decades of previous bryophyte (mosses, liverworts, hornworts) specific indices. Söderström *et al.* (2018) summarized the many nomenclatural indexing and similar projects, including: TROPICOS (<https://www.tropicos.org/home>); Index Hepaticarum, which includes all effectively published liverwort epithets spanning 12 volumes with the closing date of 1973 (<http://www.ville-ge.ch/musinfo/bd/cjb/hepatic/index.php>); Index of Hepatics by Crosby & Engel (2006) providing an equally valuable nomenclatural resource and catalogue of names at all ranks for liverworts and hornworts published during 1974 to 2000; and the recent indices of the citations for names published for bryophytes for the years 2001–2004 (Crosby & Magill 2005) and 2005 (Crosby & Magill 2006). The current index continues the series in the form of an Index for Liverworts and Hornworts now spanning over a decade (von Konrat *et al.* 2010, Söderström *et al.* 2012, 2014, 2016, 2018).

In the current index we list citations for effectively published names for liverworts and hornworts during the period January 1, 2017 through December 31, 2018. We use the date when it was first effectively published, whether it was a preprint online or in a hardcopy. However, in the reference list we give the bibliographic reference to the printed version wherever possible. Both in the list and the reference list we give the bibliographic publication year without brackets and the year of effective publication within square brackets. We also include names of fossils that may be liverworts or hornworts, but where the actual placement is uncertain, thus the inclusion of such a name does not mean that we have accepted it to be a liverwort or hornwort. Valid, illegitimate and invalid names that were overlooked by earlier indices (2000–2016) are also included. A bibliography contains complete citations for the places of publication of the names,

their basionyms and of any blocking names, in the cases where a replacement name is needed. The format generally follows that of previous indices, especially Söderström *et al.* (2018). For fossils we state the geological period. The type taxon is also provided for new higher taxa. All names are arranged alphabetically. Although names that we judge to be invalidly published under the *International Code of Nomenclature for algae, fungi, and plants* (ICN; Turland *et al.*, 2018) are included in the list, nomenclaturally they are not accepted by the authors of this index, and therefore not considered to be validly published under the ICN (Turland *et al.* 2018; “Shenzhen Code”). As in previous indices, no disposition is provided to an accepted name or to the taxonomy.

Statistics

This list contains 23 names of higher taxa, 143 specific, and 21 infraspecific names, one infrageneric autonym and 13 infraspecific autonyms for 2017 and 2018. Twenty-four names are for fossils. Sixteen older names omitted in the earlier indices are included. Thirteen of the names are invalid. Seventeen higher taxa, 100 species and 8 infraspecific taxa were published as new to science, the rest are new combinations or new names for existing taxa.

Format

The format strongly follows previous versions but is outlined here in detail for ease of reference and for minor modifications. Authorities and citation abbreviations follow the on-line version of Authors of Plant Names at the Royal Botanic Gardens, Kew, Website (www.ipni.org), which is an updated version of Brummitt & Powell (1992).

The following outlines the format for the different categories of names published during the period. Common reasons for notes are superfluous combinations, blocking names, etc., and of the era for fossils.

The name of a *new taxon* published during the period takes the form:

Acromastigum carcinum M.A.M.Renner et T.C.Wilson, *Telopea* 21: 46, 2018 (see Renner & Wilson 2018). TYPE: “Australia: Queensland: Cook District, Cape York Peninsula, Jardine River National Park, Elliot Creek, 53 m, 11°22'54.7"S 142°24'47.8"E, 8 August 2015, M.A.M.Renner 7353 & T.C.Wilson (holotype: NSW 992696, isotypes: BRI, CANB, F, G)”.

It is associated with the article in which it was published in the Bibliography:

Renner, M.A.M. & Wilson, T.C. (2018) Two new species of *Acromastigum* (Lepidoziaceae: Jungermanniopsida) from Queensland, Australia. *Telopea* 21: 45–55. DOI: 10.7751/telopea11775

A *new combination* published during the period takes the form:

Afroriccardia comosa (Steph.) Reeb et Gradst., *Eur. J. Taxon.* 273: 11, 2017 (see Rabeau *et al.* 2017). BASIONYM: *Aneura comosa* Steph., *Bot. Gaz.* 15 (11): 281, 1890 (see Stephani 1890).

Corresponding articles from the Bibliography:

Rabeau, L., Gradstein, S.R., Dubuisson, J.-Y., Nebel, M., Quandt, D. & Reeb, C. (2017) New insights into the phylogeny and relationships within the worldwide genus *Riccardia* (Aneuraceae, Marchantiophytina). *European Journal of Taxonomy* 273: 1–26. DOI: 10.5852/ejt.2017.273

Stephani, F. (1890) Hepaticae africanae novae in insulis Bourbon, Maurice et Madagascar lectae. *Botanical Gazette* 15 (11): 281–292. DOI: 10.1086/326585

One or two asterisks preceding an entry indicate that the name has been interpreted by us as contrary to the ICN (Turland *et al.*, 2018) being either illegitimate (a single asterisk) or invalid (two asterisks). We give both the article that we based our interpretation on, and a short statement about what we think is wrong. For example:

*****Heteroscyphus mascarenensis*** (S.W.Arnell) Marline, *Div. Biogeogr. Madag. Marojejy (thesis)*: 239, 2017, *nom. inval.* ICN Art. 30.5; published in a thesis (and basionym not cited) (see Marline 2017). BASIONYM: *Chiloscyphus mascarenensis* S.W.Arnell, *Svensk Bot. Tidskr.* 59 (1): 71, 1965 (see Arnell 1965).

A dagger, †, preceding an entry indicates a name for a fossil. For example,

†*Metzgerites multifidus* P.C.Wu, *Acta Geol. Sin.* 91 (5): 1548, 2017 (see Guo et al. 2017). TYPE: “Holotype: Specimen PEPB00003 (Fig. 3g); Paratypes: PEPB00003; Repository: Museum of Plant History, Institute of Botany, Chinese Academy of Sciences; Type locality: Huangbanjigou Village, Shangyuan Town, Liaoning, China”.

The index 2017–2018

Acrobolbus cinerascens var. *marginatus* J.J.Engel, *Phytotaxa* 326 (2): 156, 2017 (see Engel et al. 2017). TYPE: “NEW ZEALAND. South Island, Canterbury Prov., Arthur’s Pass Natl. Park, Bealey River, off Bealey Valley Track, 830–850 m, Engel 18465 (holotype F, isotype CHR)”. NOTE: This also creates the autonym.

***Acrobolbus latifolius* (R.M.Schust.) Dimon, Váňa, Schäf.-Verw., Heinrichs et M.A.M.Renner, *Austral. Syst. Bot.* 31 (3): 218, 2018, nom. inval. ICN2018 Art. 41.5; basionym not cited (see Dimon et al. 2018). BASIONYM: *Marsupidium latifolium* R.M.Schust., *Phytologia* 39 (4): 249, 1978 (see Schuster 1978).

Acromastigum carcinum M.A.M.Renner et T.C.Wilson, *Telopea* 21: 46, 2018 (see Renner & Wilson 2018). TYPE: “Australia: Queensland: Cook District, Cape York Peninsula, Jardine River National Park, Elliot Creek, 53 m, 11°22'54.7"S 142°24'47.8"E, 8 August 2015, M.A.M.Renner 7353 & T.C.Wilson (holotype: NSW 992696, isotypes: BRI, CANB, F, G)”.

Acromastigum implexum M.A.M.Renner, *Telopea* 21: 50, 2018 (see Renner & Wilson 2018). TYPE: “Queensland, Cook, Bellenden Ker Range, Wooroonooran National Park, Russel River catchment, track to Choorichillum from end of Gourka Road, between NW summit and Choorichillum, 17°23'45"S 145°48'56"E, 1460 m, 30 Mar 2012, M.A.M. Renner 6432, V.C. Linis & E.A. Brown (holotype: NSW896971; isotypes: BRI, CANB, F, G)”.

Acromastigum lamyi Thouvenot, *Cryptog. Bryol.* 39 (2): 234, 2018 (see Thouvenot 2018). TYPE: “New Caledonia, Province Sud, Dumbéa, natural reserve of Montagne des Sources, 950 m, rain forest on ultramafic rocks, coordinates UTM 58K 0665439E, 7553475N, on living tree bark, L. Thouvenot NC2012 (holotype: PC0733748, isotype in private herbarium)”.

Afroriccardia Reeb et Gradst., *Eur. J. Taxon.* 273: 11, 2017 (see Rabeau et al. 2017). TYPE: *Afroriccardia comosa* (Steph.) Reeb et Gradst.

Afroriccardia comosa (Steph.) Reeb et Gradst., *Eur. J. Taxon.* 273: 11, 2017 (see Rabeau et al. 2017). BASIONYM: *Aneura comosa* Steph., *Bot. Gaz.* 15 (11): 281, 1890 (see Stephani 1890).

Bazzania hookeri var. *mamillosa* (Gradst. et A.R.Benitez) Gradst. et A.R.Benitez, *Nova Hedwigia* 105 (1/2): 257, 2017 (see Gradstein 2017a). BASIONYM: *Bazzania arcuata* var. *mamillosa* Gradst. et A.R.Benitez, *Nova Hedwigia* 99 (1/2): 113, 2014 (see Gradstein & Benitez 2014). NOTE: This also creates the autonym.

Bazzania konratiana Gyarmati, *Cryptog. Bryol.* 38 (2): 120, 2017 (see Sass-Gyarmati 2017). TYPE: “MADAGASCAR, Toamasina Prov., Mananara Nord Biosphere Reserve and National Park: lowland rainforest on the E slopes of Mahavohoh Hill (very wet types along Mahavohoh River, less humid on slopes) with many tree ferns, palms and *Pandanus* ssp.), alt. 300 m, 16°27'S, 49°46.9–47.5'E, corticolous; 16 August 1998, T. Pócs & A. Szabó 9878/CA (Holotype: EGR, isotype: TANA)”.

***Bazzania speciosa* Gottsche ex Gradst., *Nova Hedwigia* 105 (1/2): 255, 2017, nom. inval. ICNArt 36.1(b); publ. in syn. [sub *Bazzania hookeri* (Lindenb.) Trevis. var. *hookeri* 2017] / ‘speciosum’ (see Gradstein 2017a). NOTE: apparent error for *Mastigobryum speciosum* Gottsche ex Steph., *Hedwigia* 25 (6): 233, 1886 (see Stephani 1886a).

Acknowledgment

This index was compiled by searching many publications that we assume may include new nomenclature. However, we are very thankful to colleagues who have sent us papers where they have published new names, especially in publications where we would not expect to find new nomenclature. We also thank all authors who have uploaded their papers to ResearchGate (www.researchgate.net) and we thank John Atwood and Bill Buck for sending us the manuscripts for the quarterly *Bryologist* new literature summaries long before they actually are published. Bill Buck and an anonymous reviewer are thanked for their valuable comments.
