

I think the app is looking good, and like the changes since I've last reviewed it. Here are my comments/questions on this latest version.

Dashboard

On the Dashboard, the overall display looks nice.

- I would like to see some type of User Guide and/or Help icon on the Home screen.
- From the Dashboard, it showed there were 3 Messages. When I click on the icon it showed all patients initials (Circle icon) on the left, 2 of which had notes. I expect to see 3 since the icon indicated there were 3. Messages should be specific to the user.

Messages

- Messages should display the most recent message on top, not the bottom. I recommend the oldest message at the bottom, newest on top. The way it is, the most recent message might easily be missed if it requires scrolling to see it.
- Messages should clearly indicate the source (person) who wrote the message.
- It would be ideal to indicate in some way (?different color, bold?) the new messages. Once read, the Message icon should then change the number to the remaining unread or new messages.

Notifications

- when I click on notifications, I only see 1 notification. Then if I tap on this one note, multiple notes show, including one I had previously added. Not sure why or what the rationale for the display is. Need to clarify this.

Going back

- When I see the multiple notes and then click back- it doesn't take me to the previous page as one would expect, it takes me back to the "My Patients" page. Consistency helps prevent user confusion.

Confusion

- Lack of clear explanations of terms. What is the difference between a message and a notification? How is one supposed to know the intended use for one or the other?
- Are messages specific to the user?
- Do Notifications go to all?
- Can anyone delete a notification? Again, need rules, suggested use for each, and clear explanations.
- Really need a Help or ? on every page.

My Patients- monitor view

- Circle with i in it on the top R of page should say Patient Info
 - General Display and build question- why have IBP1 and IBP2? If we're building an App for more universal use, the majority of patients don't have even on Invasive Blood Pressure, let alone 2. Strongly recommend first box on the Left be NIBP (Non-Invasive Blood Pressure, then box on Right displaying IBP.
 - Question- which Systolic BP is used for scoring? Need to indicate source of the scores.
 - Temp on patient Louse Albanan shows T1 and T2. Why, and what are T1 and T2? The current temp should be displayed.
 - In Resp box0 RR should be on top, CO2 on bottom. for many/most using the App there will not even be a CO2 measured, so definitely need RR on top.
 - Patient was showing a HR of 52, yet "Tachycardia" was listed below. A HR of 52 is definitely not tachycardia.
 - I again recommend using the same terminology throughout the NEWS scoring/display. The panel across the top uses "Pulse", monitor displays HR. I again recommend using the units of measure as the official Royal College of Medicine does in the NEWS chart. Ex- RR (per minute).
 - Patient Monitor page. NEWS listed at the top R. Should say NEWS2 Score. The word "score" is needed to clarify and minimize questions.
-
- Would be ideal to click on the actual NEWS score and get a full display of the NEWS (2) Score chart. This would be very helpful to allow the user to know all the parameters of the score.
 - With NEWS2 Score, need to indicate if the SpO2 source is Scale 1 or Scale 2.

Again, the app is looking very nice. I appreciate the hard work on it.

Thanks,
