

## **Project outline**

**Project Name:** PreViS Samhandlingssystem.

**Project Start Date:** 15-December-2021.

**Expected Completion Date:** 13-May-2021.

**Group Members:** Sandra Smaaberg, Kristian Teppan and Simen Bergo.

We are working with Sykehuset Innlandet, and their research and innovation department. They are developing a system called PreViS Samhandlingssystem. They are developing video communication as decision support for health personnel in the emergency chain. By connecting specialists or emergency physicians over video, ambulance personnel will have a better chance of diagnosis and triage, which in turn will ensure that the patient receives faster treatment.

PreViS is a collaborative project between PICTA and Sykehuset Innlandet. PreViS is a cross-border investment in innovative environments in the inner Scandinavia. The project will contribute to research, technical development, and innovation in the use of video technology as assessment support in prehospital services.

Our purpose is to assist the development of this system on the way to a finished solution. We will work on the web-solution, because this is relevant to our competence as web developers.
