

Instructions for running simulation model

Open RunModel.m. This script will automatically open and run Cargo.m to generate transportation demands as input to the simulation model. Thereafter it will open and run the simulation model, SimulationModel.slx.

Input parameters can be changed in the Excel documents “Fleet” and “Distances”. Speed and operability of ship-to-ship cargo transfer operation is configured in RunModel.m.

All files must be stored in the same folder when running the models.
