

with popular build tools such as *Maven* and *Gradle*. Furthermore, variables are exposed through the API as type-safe method calls with documentation retrieved from the model-description.

Recently, the FMI steering committee released a feature list for version 3.0 of the FMI standard (FMI steering committee, 2018). As a future work, we aim to support this standard some time after it has been officially released.

In the future FMI4j may also include the option to export FMUs from Java byte-code.

A request to list FMI4j on the official FMI tools page has been submitted, and is pending approval. If or when new features are added to the software, the capabilities shown in this entry will be updated accordingly.
