140	0.03243	1.65	2.08	32.43	48.65	64.9
145	0.02877	1.70	2.03	28.77	43.16	57.5
150	0.02556	1.75	1.98	25.56	38.34	51.1

Note

1. Replace dot in last 5 digits of catalogue number by a number according to the following details and depending on tolerance on required R_{25} -value: 4 for a tolerance of $\pm 2\%$; 6 for a tolerance of $\pm 3\%$; 3 for a tolerance of $\pm 5\%$.

PACKAGING

The thermistors are packaged in cardboard boxes. Taped products are available on request.

Table 5 Packaging information

PARAMETER	PACKAGING		
	BULK	TAPE AND REEL ⁽¹⁾ 1E pitch	TAPE AND REEL ⁽¹⁾ 2E pitch
Code number	2322 640 6....	2322 640 4....	2322 640 3....
Drawing	Fig.1	Fig.3	Fig.4
Quantity	500	1500 per reel, 2 reels per box	1500 per reel, 2 reels per box

Note

1. The maximum number of empty places per reel shall not exceed 0.5% of the total number of components per reel. No more than three consecutive positions may be vacant.

R_T value and tolerance

These thermistors have a narrow tolerance on the B-value, the result of which provides a very small tolerance on the nominal resistance value over a wide temperature range. For this reason the usual graphs of $R = f(T)$ are replaced by Tables 3 and 4, together with a formula to calculate the characteristics with a high precision.

Formulae to determine nominal resistance values⁽¹⁾

The resistance values at intermediate temperatures, or the operating temperature values, can be calculated using the following interpolation laws (extended "Steinhart and Hart"):

$$R(T) = R_{\text{ref}} \times e^{A + B/T + C/T^2 + D/T^3} \quad (1)$$

$$T(R) = \left(A_1 + B_1 \ln \frac{R}{R_{\text{ref}}} + C_1 \ln^2 \frac{R}{R_{\text{ref}}} + D_1 \ln^3 \frac{R}{R_{\text{ref}}} \right)^{-1} \quad (2)$$

where:

A, B, C, D, A₁, B₁, C₁ and D₁ are constant values depending on the material concerned; see Table 2.

R_{ref} is the resistance value at a reference temperature (in this event 25 °C).

T is the temperature in K.

(1) Formulae numbered (1) and (2) are interchangeable with an error of max. 0.005 °C in the range 25 °C to 125 °C and max. 0.015 °C in the range -40 °C to 25 °C.

Determination of the resistance/temperature deviation from nominal value

The total resistance deviation is obtained by combining the 'R₂₅-tolerance' and the 'resistance deviation due to B-tolerance'.

When:

$$X = R_{25}\text{-tolerance}$$

$$Y = \text{resistance deviation due to B-tolerance}$$

$$Z = \text{complete resistance deviation},$$

$$\text{then: } Z = \left[\left(1 + \frac{X}{100} \right) \times \left(1 + \frac{Y}{100} \right) - 1 \right] \times 100\%$$

or $Z \approx X + Y$.

When:

$$TC = \text{temperature coefficient}$$

$$\Delta T = \text{temperature deviation},$$

$$\text{then: } \Delta T = \frac{Z}{TC}$$
