# Weekly report: Week 19 of dissertation for Uninett AS on authentication in IoT

by Magnus Bakke & Liang Zhu at Informatics with specialization in network administration at the Norwegian University of Science and Technology

## Activities

### Monday May 6

We worked on the execution report. Only a couple of pages are missing. The bearer token for HiveManager had expired, so we spent some time troubleshooting and fixing that.

### Tuesday May 7

We finished the first draft of the execution report and began working on the final report. Pending pull requests were merged.

### Wednesday May 8

We attended a meeting with Uninett and Stein. We got useful advice regarding the presentation, among other things. We finalized the Git repository and proofread the reports after. We also included a more pleasant loading screen before the user is redirected when first visiting the frontend.

## Remarks

No remarks.
