

# Peter

## Professor

**Age:** 54 years

### Description

Peter is a professor at NTNU. His main field is software engineering, and this semester he teaches TDT4140 - Software Engineering. TDT4140 is a group based subject, and there are around 75 different groups this semester. He also teaches two other subjects this semester, and plays football 2 evenings a week.

---

### Problem

Peter is used to take use of blackboard when it comes to group work. Although he thinks blackboard has a lot of functionality, it misses one important part: what is the status of the different teams? How are they doing?

Peter needs a way to see the overall status of the teams, as he does not have the time to manually talk to every team to find out. Some kind of simple tool where he could get a list of every team and their status would be very beneficial.

As there is hard to keep track of every teams contact information, and an ongoing mail conversation with every team, it would also be very beneficial for Peter to have a "Call into meeting" button in this tool. A simple way for him to communicate with a team, if he sees that a team is in trouble due to a very low performance status.
