Endringer som kan/bør vurderes å endre/legge til.

Hvor i appen	Tilbakemelding fra brukeren	Tid og type endring
Trend	Maybe we can make the trend view a bit taller since the view scrolls anyway.	2 t Improvement
Trend	Should be able to switch from standing to laying format when you tilt the phone.	8 t Feature
Navigation	The Back button does not function consistently. Meaning, it does not always take me back to the previous page I was viewing, which is what most expect when they click "back".	Improvement 1 t Or Feature 24 t
Trend	Probably could use a "OK" or "Cancel" button in the filter modal.	1 t Feature
Notifications	Delete all button	2 t Feature
Journal - Add note	If you click Add monitor values, the keyboards covers the Create Note icon.	4 t Bug
Color theme in app	Tone down the color intensity and make everything more subtle. Less neon	8 t Improvement
Trend	The sensitivity needs to be adjusted when zooming on the data, as it continues to expand after I stop zooming.	4 t Improvement
FAB	It would be better to label the button that is specific for the functions it does on the different pages.	4t Improvement
Journal - Add note	Be able to capture the relevant data from a certain time, and more importantly to highlight the data that the note is being created about.	10 t Feature
Navbar	Sentrere «dashboard» eller «my patients» siden det er mer relevant enn «messages»	10 min Improvement
Dashboard	Notifications, specify when unread/seen. Bold text	2 t Improvement/Feature

Alle tilbakemeldinger

Område i appen	Result	
Dashboard	Good:	4
	Bad:	- Maybe a little too much info on the screen at the same time - Difficult to find the right patient if there are many. Why not alphabetic order? Or room/ bed number attached? - Maybe we should have a slight horizontal line to separate them. - "weak" colors like grey on white.
	Improvements:	B: Notifications, specify when unread/seen. Bold text B: Tone down the color intensity and make everything more subtle F: Make it customizable by user so they can see their default view.
Trend	Good:	5 Pretty satisfied, good intervals, Trend graph colors were nice, Cool
	Bad:	- zoom/swipe did not work for me - My expectation was that I could swipe the waveforms and it would move the data along the actual time continuum. - too small display for this kind of data - The Y-axis scale can be a bit difficult to read - A little to small
	Improvements:	B: The sensitivity needs to be adjusted when zooming on the data, as it continues to expand after I stop zooming. B: maybe we can make the trend view a bit taller since the view scrolls anyway. F: it would be useful with longer intervals to for patients who require critical care for longer periods of time. F: should be able to switch from standing to laying format when you tilt the phone.
Notification	Good:	
	Bad:	- Once on Notifications page, need a back button to take user back to previous screen. - Could not delete a notification - is not immediately intuitive because there are different ways to delete messages in the app.
	Improvements:	F: Delete all button

Settings(log out)	Good:	6 "Ja, er jo det man gjør ellers i andre apper. Fint at det er fellesnevnere med denne appen og andre, så det er lett å finne frem. " "Yes, I think this is the most common place to have it"
	Bad:	- When I went to log out by clicking Settings (which is not really intuitive), I was taken to the Color Theme page and had to hit the back arrow before being given the option to log out. This will frustrate users. - Strange to go to Settings for Logout?
	Improvements:	F: I would recommend a "Log out" icon somewhere on every page (Left upper corner?). B: It might be a more intuitive thing to go to have logout from the dashboard…?
Patient Details	Good:	10
	Bad:	- Different doctors/providers will want to see different things. Very importantly, things like Diagnoses, Attending Physician, DNR, etc.).
	Improvements:	B: Info icon should say Patient Info, not just info B/F: there needs to be a "close" button on the patient info page. F: will the patient info page be editable under preferences?
Journal	Good:	9
	Bad:	- Have to tap on screen to remove keyboard to create the note. - If you make more than one note, there needs to be more separation between notes, or somehow make it clearer which note the monitor data belongs to. - Not difficult, but the first time I tried I only found the chat for this patient
	Improvements:	B: Above or below blue + icon should say "Add Note". B: If you click Add monitor values, the keyboards covers the Create Note icon. F: I assume Add monitor values means current values, but they might not reflect the values that necessitated the note. Would be best to be able to capture the relavent data from a certain time, and more importantly to highlight the data that the note is being created about. (Example, just select HR from a specific time). B?: If a note is created and you go back to edit the note, you lose the option to "include data monitor" like when originally making the note. If I meant to include it when making the original note but forgot to, that option is no longer available.
Navigation	Good:	Easy to navigate. Intuitive.

	Bad:	- The Back button does not function consistently. Meaning, it does not always take me back to the previous page I was viewing, which is what most expect when they click "back". - For me it's a bit confusion that it's several ways to navigate (bottom, top, Info-button). Try to find 1 "master way of navigating"? - Enten swipe der det er mulig fremfor en mix, forsøke å få mer inn i button down right fremfor at jeg må navigere både oppe og ned i skjermen.
	Improvements:	B: Sentrere «dashboard» eller «my patients» siden det er mer relevant enn «messages»
Colors	Good:	Dark: 3 Light: 1
	Bad:	- Esp in the "LIGHT mode", the last option in the trend is NOT visible well enough - Too strong color - Var lettere å lese med «dark mode» , enn med «light mode», f.eks pga gult på hvitt. Men bakgrunnsfarge er også preferanse. - Maybe too many bright colors at once, some colors could be a little less bright - colors a bit disturbing - Good, except for neon colors.
	Improvements:	B: In light mode probably the green needs to be a bit darker, and the yellow a bit darker. B: Tone down the color intensity and make everything more subtle
FAB	Good:	Yes it was intuitive - If you have tried it once it is perfect and such an app is to be used by expert users again and again, not new users every day
	Bad:	- not very intuitive. x2
	Improvements:	B:It would be better to label the button that is specific for the functions it does on the different pages.Maybe a short description : "actions". B: I would expect to find a symbol that looked more like a chart. F: make journal as a TAB. Same as LIVE, TREND
