

2021-03-31 møtenotater

Date

31. mar. 2021

Participants

- @ Pernille Olsen
- @ Bjørn-Erik Ervik
- @ Espen Vad

Previous sprint

- Exam
- Auto deploy
- See how many tables are left when choosing from time on the front page
- Administrative view
 - As an owner, I want the sorting in the administrative view, to sort both after day in the month and month
 - Change format to YYYY/DD/MM
- Config env
- Update backend to include routes and controllers
- Change all popups to one single file with custom message
- More than 3 guests - choose more than one table

Goals

For next Sprint

Suggestions that the project owner and coordinator comes with

- In the from field, on the front page, that table available is all the way to the right
- Tweak icon size for numbers reserved on Table-GUI
- Fix door for all sizes
- Make Table-GUI not so stretched out for phone users
- Not have the option to pick more guests than available for a certain table
- (Maybe)Make it so we only can choose 2 tables that are right next to each other
- Make a separate table for the Users
- Make a simple register and login system(to be polished more in future sprints)
- Make it so that regular customers can only see basics things.
- Have a login for administrative view, with full access to the admin pages
- Finalize the code optimization given from TsLint

From last Sprint

- As an owner, I want the administrative view to blink when a new reservation is coming in, and if there is one hour or less left until the reservation
- As an owner, I want the administrative view to update (real-time) when a new reservation is added

Discussion topics
